Handicapping by Example William L. Quirin

Here's a thoroughly practical book that provides concrete examples of how to put into practice modern theories of handicapping. Using examples of actual races, Dr. Quirin shows how to analyze forty-one different situations that may arise due to the race conditions, the track surface, or the horse itself. In each chapter, races have been carefully chosen not only to illustrate a major theme but also to provide several additional handicapping hints. Included are first-time starters, maiden races, two-year-olds, state-bred races, starter handicaps, restricted and classified allowance races, races at seven furlongs, races on soft grass, races taken off the grass, races in slop, European form, and many other topics for beginners and experienced handicappers alike. There is also an appendix of grass-breeding statistics. William L. Quirin earned his Ph.D. in mathematics at Rutgers University and at the time of publication was professor of mathematics and computer science at Adelphi University. His previous books are *Winning at the Races: Computer Discoveries in Thoroughbred Handicapping*, and *Thoroughbred Handicapping: State of the Art*, both published by William Morrow. He lives in Garden City, New York.
