**Linux DNS Server Administration (Craig Hunt Linux Library)** Craig Hunt, Criag Hunt

The Craig Hunt Linux Library provides the advanced information that Linux professionals and systems administrators need to keep their Linux servers up and running at maximum efficiency. Developed by noted Linux and TCP/IP guru Craig Hunt and written by acknowledged Linux experts, these books dig deeper into each of the eight key Linux topics -- Samba, Apache, DHCP, NFS and Automounter, Sendmail, DNS, security, and system administration--than any other book on the market. The Domain Name System (DNS) is one of the keys to the Internet, facilitating the translation of English-like domain names (www.amazon.com) into Internet Protocol (IP) addresses (208.216.182.15). In this detailed examination, Linux and TCP/IP guru Craig Hunt takes you deep into the guts of DNS, explaining the architecture, protocols, and BIND; illustrating basic configuration of the resolver, caching servers, and slave servers; and demonstrating how to create subdomains and use Dynamic DNS. Includes coverage of how to implement DNS security, test DNS, and debug and troubleshoot DNS.
