Offshore Loss Prevention: A Systematic Approach (British Hydromechanics Research Group (REP))

Offshore Loss Prevention: A Systematic Approach (British Hydromechanics Research Group (REP))

Responsibility and accountability for the safety of offshore operations rests at the highest levels of management. Experience shows that inherently dangerous activities can be safe if well managed, yet common and everyday activities can be disastrous if handled negligently. The offshore industry has always recognized the need to design a high level of inherent safety into facilities. Recognizing the special hazards and the potential for extreme events such as ship collisions or fires and explosions involving large numbers of people, many operators over the years have incorporated specialized engineering tools and techniques. However, reliance on good engineering practice, the application of approved standards and certification and inspection regimes is not sufficient. These Conference Proceedings look at how the offshore industry can meet the challenge of implementing continuous and comprehensive safety assessment, combining engineering tools and management systems in a formalized and objective manner.
