Chemical Reaction Networks: A Graph-Theoretical Approach

Oleg N. Temkin, Andrew V. Zeigarnik, D.G. Bonchev

Chemical Reaction Networks: A Graph-Theoretical Approach Oleg N. Temkin, Andrew V. Zeigarnik, D.G. Bonchev

Over the last decade, increased attention to reaction dynamics, combined with the intensive application of computers in chemical studies, mathematical modeling of chemical processes, and mechanistic studies has brought graph theory to the forefront of research. It offers an advanced and powerful formalism for the description of chemical reactions and their intrinsic reaction mechanisms. *Chemical Reaction Networks: A Graph-Theoretical Approach* elegantly reviews and expands upon graph theory as applied to mechanistic theory, chemical kinetics, and catalysis.

The authors explore various graph-theoretical approaches to canonical representation, numbering, and coding of elementary steps and chemical reaction mechanisms, the analysis of their topological structure, the complexity estimation, and classification of reaction mechanisms. They discuss topologically distinctive features of multiroute catalytic and noncatalytic and chain reactions involving metal complexes.

With its careful balance of clear language and mathematical rigor, the presentation of the authors' significant original work, and emphasis on practical applications and examples, *Chemical Reaction Networks: A Graph Theoretical Approach* is both an outstanding reference and valuable tool for chemical research.

From reader reviews:

Paul Birch:

Do you have favorite book? Should you have, what is your favorite's book? Guide is very important thing for us to know everything in the world. Each book has different aim or even goal; it means that reserve has different type. Some people feel enjoy to spend their time for you to read a book. They are really reading whatever they acquire because their hobby is usually reading a book. Think about the person who don't like looking at a book? Sometime, man or woman feel need book if they found difficult problem or exercise. Well, probably you should have this Chemical Reaction Networks: A Graph-Theoretical Approach.

Armando McFarland:

What do you with regards to book? It is not important to you? Or just adding material when you really need something to explain what the ones you have problem? How about your spare time? Or are you busy man? If you don't have spare time to do others business, it is make one feel bored faster. And you have free time? What did you do? Everyone has many questions above. They should answer that question since just their can do that will. It said that about book. Book is familiar in each person. Yes, it is suitable. Because start from on jardín de infancia until university need this kind of Chemical Reaction Networks: A Graph-Theoretical Approach to read.

Beverly McClendon:

The e-book untitled Chemical Reaction Networks: A Graph-Theoretical Approach is the publication that recommended to you to see. You can see the quality of the e-book content that will be shown to you actually. The language that article author use to explained their ideas are easily to understand. The writer was did a lot of study when write the book, and so the information that they share to your account is absolutely accurate. You also could get the e-book of Chemical Reaction Networks: A Graph-Theoretical Approach from the publisher to make you more enjoy free time.

Susan Albro:

Reading a book to be new life style in this yr; every people loves to study a book. When you read a book you can get a lot of benefit. When you read publications, you can improve your knowledge, due to the fact book has a lot of information in it. The information that you will get depend on what kinds of book that you have read. If you need to get information about your examine, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, this kind of us novel, comics, along with soon. The Chemical Reaction Networks: A Graph-Theoretical Approach offer you a new experience in reading through a book.
