Observe and report potential catheter-related problems early, and prevent the patient from experiencing significant complications. Urinary catheters in the home setting can be used to monitor urinary output in postoperative or severely ill patients, manage incontinence in terminally or severely ill patients, and provide short-term relief to patients suffering from pressure ulcers. This in-service module provides an overview of the types of urinary catheters, explains complications associated with catheter use, and describes the role of the aide in providing physical care and emotional support. **LESSON OBJECTIVES** After completion of this program, the home health aide will be able to: Identify three types of urinary catheters Describe three signs and symptoms of a catheter-associated urinary tract infection List three things that should be considered when performing catheter care Contents of this lesson: A clearly written fact sheet A 10-question post-test to measure understanding of the subject matter An answer sheet with a place for the instructor's comments and signature An illustrative, homecare-specific case study Suggested supplemental learning activities An attendance log and certificate of completion
