Energy-Efficient Architecture Roberto Gonzalo

How is an energy efficient building created? Which are the most important criteria pertaining to urban development or the conception of the floor plan? What are the optimal dimensions appropriate for the building's usage but also ensuring energy efficiency? Which building elements and systems are most suitable? This book systematically explains all relevant criteria and parameters as regards urban development, design and the subsequent construction of a sustainable building. The immense potential for cutting costs by modernizing the energy systems in old buildings is also demonstrated. Completed projects are presented according to their usage and are analyzed and evaluated in the light of the above criteria. For this purpose extensive plans and technical information are used to illustrate the "energy profile" of each building. This shows the particular importance of planning details carefully. An annotated subject index concludes the volume.
